Centre for the GeoHumanities

Welcome to the seventeenth edition of the Centre for the GeoHumanities enewsletter. We hope you'll enjoy it and as ever please do get in touch if you have any news you would like to share or events that you want featured.

Creative Commissions
Round Four

Subsurface
In collaboration with Khvaigarh & Cambodia Living Arts

The Centre for the GeoHumanities inaugurated our Creative Commissions programme in 2017 with the aim of fostering relationships between early career researchers and creative practitioners. Four rounds of commissions have now been completed. The first, in 2017, was funded by the AHRC and focused on Creating Earth Futures. The second, fantastica in Mobility, was convened in 2019-20 in collaboration with our partners at the Centre for Mobility Humanities in the University of Palma. In 2021 a third round with the Centre of Diaspora Studies will explore Diasporic Geographies. Our fourth, with the Sainsbury Institute, the Cyprus High Commission and Fitzwilliam Museum Cambridge.

In 2021, in collaboration with the ERC-funded project Think Deep and the artist collective Khvaigarh, we launched a fourth round of commissions entitled *Subsurface*. Building on the foundations of the commissions funded three early career artists developing ideas on the Cambodian subsurface in collaboration with researchers on the Think Deep project. Each artist was paired with a Cambodian arts organisation and invited to spend a duration of the work in progress in three *Initial studios events* in Phnom Penh, organised by Khvaigarh and project PI Penny Edmonds-Poli. Each artist was also invited to work with a local community and a space in Phnom Penh, where they focus on making work and building the local artistic community in collaboration with Cambodian Living Arts. Due to the Covid-19 pandemic, the artists in the end only developed the sculptural work *Assemblage*. Mech Sereyrath also created the multi-media installation *Underneath* and Kong Sidea, who developed the film project *Under Sands Below*.

Kong Sideo, *Sands Below*

Sands Below is an ongoing project exploring the pivotal role of sand in Cambodia's social, economic and ecological systems. Focused on a site of sand extraction in Koh Kong province, SW Cambodia, and the material infrastructure at the Port Autonome, the project commissioned a multi-media installation that explored dramatic alternation of the landscape, the ecological consequences of sand mining and the local resistance. Using found-footage and animation, the project critiques the deceptive nature of these transformations, creating a dystopian vision of the future. The Think Deep collaboration further supported the film's impact at work and enabled the exploration of site-based research practices and their challenges.

Prak Dalin, *Assemblage*

Dalin used the commission to explore rural living and engagements with the subsurface, including through salt tree sculpture, and traditional carving practices with local stone. Using materials including cement, sandstone and found objects, Dalin's work explores the subsurface as a realm of sculptural fertility, as the subsurface in relation to power and memory. She undertook a series of research visits ahead of her work in Phnom Penh, Kampot and Kep, where the stone carving processes were not only reshaping mountain tops, but the ground under local villages, and worked with local crafts people weaving and carving in rural Cambodia. The developed work explores the subsurface in both intra and material vocabulary beyond urban spaces and installed her in the Cambodian countryside and traditional Cambodian craft and artistic and materials.

Mech Sereyrath, *Underneath*

Sereyrath focused her commission on developing a new project on groundwater that sought connections between contemporary resource politics and Cambodia's ancient past. Working with Cambodia Living Society Disneylang she based research at the ancient temple site of Angkor Wat, once the centre of a vast "hydraulic city", she discovered the ancient Khmer engineering that had created the vast water reservoirs and tank villages. Creating a series of sculptural works using stone fossils and projected light she sought to create an experience of going underground, exploring the ancient water systems and connecting to a scientific dimension to her work. Sereyrath used the commission to advance her artistic practice including her digital media skills, which she has developed through the pandemic, and to develop connections with new practitioners – both inside the workshop and outside in the landscape.

The Subsurface project received funding from the European Research Council (ERC) under the European Union's Horizon 2020 research and innovation programme (Grant Agreement No. 817444 THINK DEEP).

Research News

Siân Bowen: Plant Humanities on the Move

The artist and researcher Siân Bowen, an Honorary Research Associate at the Centre for the GeoHumanities, has been developing a practice rooted in the field of plant humanities. Amongst her previous projects are the Leverhulme-funded After Nonsu Madeleinus Sensu and Preserving Rare Plants, in collaboration with Royal Botanic Gardens, Kew. Siân's current research project, Plant Humanities on the Move, looks at the journeys of Plants illustrated by the Royal British Society of Foundations in Drama Foundations) and work on the settlement example of museum collections (collected in Spaceship the Ephemeral Sian Bowen Plant Humanities on the Move). Siân's work is supported by the Arts and AHRC) and runs with the RSA, Goodwin (supported by Arts Council England). These projects and more are described on Siân's website, www.sianbowen.com and she works better across the country, e.g. Salford.

An award from UKRI is currently enabling Siân to work in a remote area of northern Japan with scientists from Hokkaido University. Between the winters of 2019 and 2021, she is investigating the extraordinary botanical diversity of Hokkaido's Shiretoko peninsula, which is known for four metres of snow, paper flows are tightened through hair and moisture. The final wet sheets of paper are then stored in snow overnight, which helps to remove any remaining acid. As aged woodlets Sarah's pleasant open the snow covered landscape.

During Siân's first visit to Hokkaido's workshop in March of this year, he was able to make a start on the first sheets of paper and to work with him at the project to her title. This was her response:

As an artist, Jack started her by me, very poetic associations. But it is also scientific, ecological and practical and extremely resource.

I was very intrigued by the concept of how mice could be used to create different shades of white in wash. Incidental Japanese papers utilised chemicals.

The ephemeral and relative of fibre have been central themes in my own work for a long time. Particularly in relation to light and the natural environment. So I wanted to observe not only how the paper and mice can make the plant fibres disappear, but also how the paper can be used to create a new, interested therefore to Japanese making and consider paper from multi-generation – both inside the workshop and outside in the landscape.

Before I came to this area of paper, I was very interested to read of your concepts about nature and what it can mean to be someone who has devoted their life to making work. For example, "I think of myself as a botanic Jazz as a way of thinking I had at my best times I am. "What kind of paper would that like to become?

Hokkaido, October 2019. Sian Bowen, Fiona Roberts Goodwin, the house of Oki-Nawa's making Shinobu Ueda in Japan.

A recent award from our partners in the Centre for Mobility Humanities at the University of Palma (fantastica in Mobility) will enable Siân to develop her research interests in a new direction. A Visiting Fellowship at Wytha, Mallorca, will enable her to work with Professor Catherine Brace on plant mobility and plant health. This research takes place at a time when the coincidental publication of Sian's book, *Plant Humanities: Ecology, Aesthetics and Natural History* (Palgrave) has been published and international projects of Interpreter's habitation, refuge and flight. From the time that they first began to farm, created the conditions for the spread of plant species, Siân's work looks at plants themselves in the mirror – existing, diversifying and expanding – that to be collected, carried, stored, placed into storage, exhibited and repeatedly handled.

Siân's research will explore the unstable nature of these materials, looking at the ways in which they are preserved and lost. The first of a residency of flight, ranging harmoniously shedding, crumbling, flaking the and looks of the gallo to the collection as a work of Japanese. Sou-will be a research Trailer's gaffe, not as static, and hermetically sealed dried objects, but as complex spaces of temporary refuge, retreat and change, and subject to constant transformation. The work focused on gifts that significantly reach out to connect us with universal forces.

Local Theatres: Participation, Inclusion, Imagination

A Zoom screenshot by Tim Baker of Cwmbran Arts Centre, Torfaen, South Wales, UK, 2020

Local Theatres is an AHRC-funded interdisciplinary project involving academics from Royal Holloway, the Universities of York and Manchester Metropolitan, and 12 theatres in the UK. The project examines the role of theatres, as local cultural organisations and storytellers, in responding to the complex politics and identities of their communities. The project is led by Professor Tim Baker from the Centre for GeoHumanities, all based at Royal Holloway: Nadia Nicholson, Professor of Theatre and Performance, who leads the Theatre and Performance Research Unit (TPRU), and Dr Jonathan Gale, Geography Department. This research takes place at a time when location has re-entered the political lexicon. In England, place-based policy has been central to the government's levelling up agenda, and has become local decision-making, with new regional inequalities, town deals, enterprise, and revitalise town centres. Using locality is also an important concept in the cultural sector, where ideas of place, art and culture can also be inhospitable, exclusionary, and inward looking. We have also seen some geographers and others turning to reconsider the nature of the local and think about its relationship to work on place.

Across the project there is an emphasis on the relationship between theatres and their local populations, exploring both the ways that theatres serve these populations, and the ways that they are included in the cultural life of communities. The project has also looked at a range of examples and locations, including focused case studies in Coventry, Hastings, Slough, and Scunthorpe as well as different parts of London.

One strand of Local Theatres explores the place of theatres in the local cultural ecology, and the ways in which they work with and for their local communities and professionals' roles in the local scene and no other arts institutions. Particular concerns are the strategies for inclusion used for example, by theatres in Hastings and Scunthorpe, and the role of local theatres in developing and supporting artists. Carrie Cook's work in Hastings focuses on the Stables Theatre as a local creative hub, and the role it plays in the town's cultural life. Nadia Nicholson's work on sustaining local creative networks, supporting new writing, acting as a community hub, and working with young people and others to develop their skills. Tim Baker's research explores the relationship of the new building to the locality, a theme that has run through other aspects of the project.

Slough Creative Hub, Slough, Berkshire, UK, 2020

A second strand of the project has investigated how local places are performed and represented. David Gilbert has been working with Scunthorpe Museum on the history of the Scunthorpe Pageant, and Adelle Hackwood on the way that the city is performed theatrically, exploring representations of the post-industrial city. The project team have also worked with Slough Creative Hub, Slough Museum and Slough Arts Council, Public Record has also part of the Public Arts programme, bringing the expertise and resources of the National Theatres to Slough, and Slough Arts Council. Slough Creative Hub is also particularly its cultures of music and dance, drawing on the assets and experiences of participants. Theatre Search Samindah Stories worked with the Slough Museum and Heritage Centre to develop a piece of performance to make a production about the history and culture of a small part of the city. In both there was a concern not to erase the industrial past, often a dominant strand in understanding Scunthorpe, but to overlap it with stories of diversity, movement and different local lives.

The project held a symposium at Royal Holloway in April 2020, bringing together academics and theatre practitioners to discuss the role and particularly theatre leaders from a range of places and types of venue. The Symposium featured new work from Tryfe Shaun Theatre from Scunthorpe, Slough Creative Hub, and Stables Theatre in Hastings. Geographer Tim Cresswell's keynote focused on performance and ecosystems presenting work from Third. Its new project thinking about the relationship between theatre and place. The symposium was about how local theatres can be part of the discussion of how society will cross pride in times of conflict and cultural fracturing.

The work is ongoing, and is funded until the end of 2020. For more about the project, click here.

Slough Creative Hub, Slough, Berkshire, UK, 2020

Centre Visitors
2026-27

Augusta Ada's, The Lands at Tarnside, 1815. Green cards to Edith Abagail, Royal Geographic Observatory

The Centre for GeoHumanities continues to welcome international visitors interested in our research and activities, many participating in the Landscape Surgery undergraduate seminar which meets fortnightly in the Centre's Common Room. Our visitors in 2019-20 have included visitors and PhD students from Delhi, Ontario, Palma, Paris, Nanjing, Naples, Neuchatel, Padua, Rio de Janeiro, Shanghai, Uppsala, Wuhan and Zurich.

In 2019 and 2007 we are delighted to welcome further visitors from our partner institutions in Nanjing, Palma and Wuhan. We will also welcome from China and Turkey with research interests across the GeoHumanities, including visual art, behavioral collections, exploration, coastal mapping and intangible heritage.

Dr Claudia Aldobino is a postdoctoral researcher at our partner institute Sharda, University of Padua, working on a two-year project on Venetian on the move between Italian and Iberian exploring colonial, diplomatic and cultural networks in the Mediterranean and Atlantic (1670-1715). She visited the Centre in February 2020 to conduct archival research at the Natural History Museum, attending our PhD seminar Landscape Surgery and Centre for Print Humanities at Oxford.

Bruno Vieira is a PhD student at the State University of Rio de Janeiro, a visiting PhD student at the University of Coimbra. His research project concerns three through optimal representations of the Plata de Circunferência (Circle of Peru. He visited the Centre in Spring 2018 and participated in Landscape Surgery and Centre for Print Humanities at Oxford.

Kaiti Adam Cotsiolis is a PhD student in the History of Science & Technology programme at Istanbul Technical University, studying for a Master's degree in Science, Technology & Society. He is also a Visiting Fellow in Chinese Medicine 1660-1914. He will be a Class PhD student in the Centre in 2019-7, supported by a scholarship from TUBITAK, the Turkish science and technology research council.

Xuerong Chen is a PhD student in the Centre for Historical Geography at Nanjing University. She is also a Visiting Scholar in the Study on Coastal Profiles in Nineteenth Century UK Hydrological Data & Focus on Eastern Asia. She is planning to visit the Centre in 2019-7 supported by a visiting scholarship from Fudan University.

Luminous globes at the Museum of Geography, Padua
A Review by Veronika Jelitto Dora

Luminous globes at the Museum of Geography, Padua

Illuminated globes at the University of Padua's Museum of Astronomy – an installation curated by Giovanni Donadelli, Dec 2025–Jan 2026

The luminous globe has kept watch over generations of children in their bedrooms. Both earthly sphere and night-light, it holds knowledge and wonder within its glow. It conjures up intimacy and triggers fascination for distant worlds. It stirs and expands the geographical imagination. It warms and charms.

Between 19 December 2025 and 11 January 2026, Padua University's Museum of Geography hosted around 50 luminous globes from different countries and eras in the largest display of its kind ever held in Italy.

Conceived by the museum's curator Giovanni Donadelli, himself a collector of luminous globes, *Have a Goodnight* was more than an exhibition or immersive installation. It was a visual poem. Showcasing exemplars ranging from rare early twentieth-century globes to brightly coloured Disney models, it temporarily turned a prestigious hall of Palazzo Wollemborg into a cozy bedroom in which spheres of all sizes and hues lay quietly suspended in the darkness. A magic twilight world in which the familiar was made strange and the strange familiar, where oceans turned pink, yellow and black, where pastel tones alternated with vibrant vintage palettes, where the USSR and Yugoslavia shone in amber glow. A peaceful microcosm where, in Donadelli's words, "light does not simply illuminate—it evokes memories". Roaming from one sphere to the other, scouring countries no longer on the map, lingering over the vivid detail, the eye wandered between imagined worlds and faded childhood reveries. Visitors suddenly found themselves at once at home and lost, in a place where time seemed to have been gently suspended.

The timing of the exhibition—during the Christmas holidays—could have not been more fitting. Stepping into that little magic world on a cold winter afternoon, one could help but recall the words of the Apollo 8 astronaut William Anders as he glimpsed our life-swirling planet while orbiting the distant lunar shores:

"If you can imagine yourself in a darkened room with only one visible object, a small blue-green sphere about the size of a Christmas-tree ornament, then you can begin to grasp what the Earth looks like from space. I think that all of us subconsciously think that the Earth is flat or at least almost infinite. Let me assure you that, rather than a massive giant, it should be thought of as the fragile Christmas-tree ball which we should handle with care."

Plant Humanities research at Kew Gardens

PhD student seminars

The palm house at Kew Gardens, drawing by Edward Adveno, c.1850s

Collaborative doctoral research students in the Centre for GeoHumanities contributed many of the seminars in a monthly seminar series in 2025-26 convened by Caroline Cornish, humanities coordinator at Kew and an affiliate member of the Centre. The humanities seminars are designed for PhD students and others at Kew interested in the Plant Humanities, as featured in the November 2025 Newsletter. Below are the seminars contributed by Royal Holloway PhD students, all of whom are funded by UKRI.

Aurora Prehn: The Biocultural Diaspora of Tea in the 21st Century: Cultivation in the UK and the USA (25 Sept 2025)

Viveca Merlegård: Indian tiger-hen and now: integrating filming, writing, and archives (30 Oct 2025)

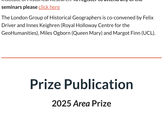
Christina Hourigan: Tree biographies and the cultural history of place at Kew (27 Nov 2025)

Jack Seagrove: Kew and the British Virgin Islands: From Botanic Stations to Tropical Important Plant Areas (29 Jan 2026)

Sophia Kamps: Publishing and Illustrating Natural History in Victorian and Edwardian Britain: Lovell Reeve, 1840-1920 (26 March 2026)

Michelle Payne: Reinterpreting Marianne North: Life Writing, Botanical Travel and the Legacies of Empire (25 June 2026)

Dancing across Disciplines



Dancing Across Disciplines was a one-day event in Durham on 28 April 2026, hosted by the Institute for Medical Humanities and the Moving Bodies Lab. It featured researchers and practitioners working with dance from different disciplinary backgrounds, showcasing interdisciplinary work across a range of topics, methodologies, and experiences. Amongst the talks was a presentation by Sofie Narbed of the Centre for GeoHumanities entitled 'Attending: three ways'.

The event was designed to prompt reflection and discussion across disciplines in the arts, humanities and social sciences. While scholarship on dance spans multiple disciplines, these perspectives do not always intersect fruitfully. The aim was bring them more fully into dialogue in order to create new insights into research practice and exchange.

The Moving Bodies Lab seeks to investigate and experiment with the ways in which moving bodies connect to health. Its research starts with the moving body itself and the methodologies and outputs and opportunities that moving bodies create. The Lab currently includes Bridging Fellow Daniel P. Jones, who studied for an MA in Cultural Geography (Research) at Royal Holloway prior to undertaking his PhD at Newcastle on the geographies of impulse seen through the lens of Tourette's syndrome.

London Group of Historical Geographers

Seminars Summer 2026

12 May 2026 - **Heather Ellis** (University of Sheffield)
Feeding the Nation's Children: School Meals, Inequality, and the Politics of Care in Modern Britain

26 May 2026 - **Paul Griffin** (Northumbria) & **Cheryl McGeachan** (University of Glasgow)
Building from the Basics: Collaborative Writing in Historical Geography

9 June 2026 - **Veronica della Dora** (Royal Holloway, University of London)
The Man Who Made Planets: Kenneth S. Fogg's Journey from Air Age to Space Age

All seminars are open to all, beginning at 5:30pm and are available online. Those on 12 May and 9 June will also take place in person at the Institute of Historical Research. **To register to attend any of the seminars please** click here

The London Group of Historical Geographers is co-convened by Felix Driver and Innes Keighren (Royal Holloway Centre for the GeoHumanities), Miles Ogborn (Queen Mary) and Margot Finn (UCL).

Prize Publication

2025 *Area* Prize

We are delighted to share the news that a paper by Maddie Joyce, one of the Centre's PhD students, has been selected as the winner of the 2025 Area prize for excellent geographical research published by early-career scholars. The prize has been awarded annually since 2001: this is the first time a Royal Holloway researcher has won it. The prize will be presented at the annual meeting of the Royal Geographical Society (with IBG) in June 2026.

Maddie's paper, 'Sensing the sky's edge: Atmospheric insights into the Korean demilitarised zone', part of her Royal Holloway PhD on the Korean Demilitarised Zone, was inspired by the atmospheric methods pioneered within the Centre for GeoHumanities by Sasha Engelmann. *The Area* editors describe her paper as follows: as follows:

With this innovative article, Maddelene Joyce pushes cultural and political geographers to attend closely and creatively to both affective and material atmospheres. Taking the anticipation of an encounter with the Demilitarized Zone (DMZ) between North and South Korea as both prompt and problematic for rethinking borders across fog, radio signals, and no-go zones, Joyce's article is a deserving Area Prize winner.

You can read the paper here

Also "highly commended" by the RGS was Rosie Knowles, until recently a PhD student in the Centre for GeoHumanities, for a paper entitled 'Narrating health and well-being with vulnerable participants: the ethics of composite fiction as a creative method in health geographies', which you can read here

9th Cosgrove Lecture

Lithic Lives: Earth Stories from Cambodia's Land of the Gemstones

Harriet Hawkins
(Royal Holloway, University of London)

Monday 11 May 2026

Royal Holloway University of London
Moore Building auditorium
5:30pm, followed by a reception

A fragment of ruby; a hand-written list of sapphire sales from February 1918; a much-loved pop song crooned during Cambodia's second 'Golden Age'; a necklace of tumbled garnet chips; a golden otter; a mosquito infected with drug-resistant malaria; a head-dress from Ancient Rome; an up-turned muddy plastic bottle on a bamboo stick. Any and all of these offer generative beginnings for telling Earth Stories from Cambodia's Land of the Gemstones.

The Land of the Gemstones, located in Cambodia's North-Western forested uplands, has for millennia been a source of gemstones, a site of geopolitical controversy and a richly fabled land. Yet in the wake of the Khmer Rouge whose genocidal regime was funded by extraction of stones and timber from the area, many of these stories remain untold. For the past three years we (a group of Cambodian and British researchers and artists) have been collaborating with miners, cutters, dealers, stones and spirits to track gemstone geobiographies and explore the lithic intimacies of lives lived seeking, shaping and protecting gemstones.

The Earth Stories we share here draw together ethnography, image, song and stone in a geopoetic response to the challenges of living and researching lithic lives in the Land of the Gemstones. Some of these challenges are unique to this place and its practices, others are shared with those mining around the world and all sit within the impulse to complicate the Earth stories that colonialisms have told.

This lecture draws on the experience of Harriet and her team working on THINK DEEP, a research project funded the European Research Council.
